

Performing Standard Series Marimba

PS2000 Series Marimba

A thoughtfully designed series of marimbas, which compliments our top line of instruments. Perfectly tuned bars and resonators together with visually appealing frames and features usually associated with much more expensive marimbas

Pitch	A=442	Casters	Large with brakes

The Vancore PSM-2001 4.3 Octave Padauk Bar Marimba is one of the best selling marimbas in the US! Vancore has recently taken a terrific instrument and made some significant design improvements!

Most notable is the new "**FLOATING BAR SUSPENSION SYSTEM**". This proprietary bar support system actually increases bar resonance by 20%. Precision laser cut bar support arms are angled to insure that each and every bar is supported exactly at the nodal point. Unlike systems where individual tines are mounted into wooden rails, this suspension system is modular and functions as an integral part of an overall ergonomically designed instrument.

High Quality Bars

Here's a close-up of the high quality padauk bars that Vancore meticulously shapes. Both fundamental and harmonic tuning ensure that your instrument will be perfectly in tune!

Resonator clamp system

The resonators feature high quality hinges and clamps for easy "break down". Transporting this instrument is both quick and easy !

Double pin alignment

Double steel pin alignment guarantees that the solid Ash rails go in straight and stay straight! Special clamps insure that the 2 piece rails are joined as one.
